CONCORDE LINER PLUS CABIN CONSTRUCTION

In motorhome construction, Concorde stands for perfect insulation and outstanding stability. This is primarily down to the lack of thermal loss, completely sealed solid-therm cabin construction with polyurethane ridged foam ledges as well as the insulation of the side walls with 38 millimeter strong RTM foam. If that was not enough, the under and in-between floors are finished in a sandwich type construction and filled with a total of 70 millimeters of insulation. The side skirt panels, bumpers as well as the front mask and rear parts are made from highly stable and nonetheless elastic fiberglass composite material. The very glossy and flush wall surfaces made from aluminium sandwich construction. Aluminium roof profile ledges with rainwater drainage channels to reduce sidewall staining. 10-year water ingress warranty on the body against water ingress from the outside (subject to annual inspection in accordance with the Concorde warranty conditions).

Technical modifications reserved provided that the overall product quality remains the same or is improved and the intended purpose is not impaired. On publication of this technical information, all previous are rendered invalid. Subject to change without notice, errors excepted.
